

Hive Temperature Matters

Healthy hive:

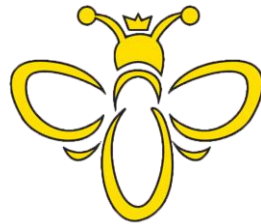

Worker bees maintain steady hive temperature to rear new brood when the hive has a laying queen.

Queenless hive:

Workers don't go the extra mile to keep the hive temperature steady when they produce new queens.

The Bee Corp

Queen's Guard supports proactive hive management

“The Bee Corp provides affordable technology which will help us manage our bees more efficiently. The data has been helpful in remediating queen-less hives. It has found, with 100% accuracy, hives that have issues with broodlessness.”

- Jeff S., RJ Honey
Lebanon, Indiana

- ✓ **Minimize costs of a queenless hive**
- ✓ **Maximize honey production**
- ✓ **Restore colony strength sooner**

Queen's Guard alerts you when your hive becomes queenless.

\$70/ hive • annual subscription

Gain access to unlimited queenless hive alerts for just under \$6/ month. No upfront hardware costs or hidden fees.

A queenless hive will result in a severe setback in colony growth and productivity. Introducing a mated queen immediately after queen loss is your best bet to restoring your hive to full strength.

Act faster with Queen's Guard.
